Programming Paradigm: The Built-in 1972 Key Starter Dennis Ritchie and The Bell Lab; ANSI X3J11 (ANSI C)ISO/IEC JTC1/SC22/WG14 (ISO C)Static C11Type Static Eject, Dynamic programming languages implementing Intel C, GCC, Vacom, MSVC, Sissons, C*, unified parallel programming influenced by B, ALGOL 68, Fortrain, PL/I affected C++, C#, Goal C, D, PHP Computing platformCross Platform was created by Dennis Ritchie at at&#amp;t Bell Lab between 1969 and 1973. During this period, its primary purpose was to rewrite the Unix operating system to C. Instructions for formatting this language are easily converted to computer instructions. Many languages are developed from C, such as C++, C Sharp (C#), PHP, Python, Java, JavaScript, etc. Programming language example &#amp;t;studio.h&#amp;t;c Example #1 include primary Int() { Int vishal; printf(enter number); scanf(%d, & Vishal); printf(feed%d, Vishal); Return 0; } Output Enter number 10 Enter 10 example 2 #include main int () { printf(c language wikipedia); return 0; } Language c output Wikipedia displays the words written or placed within printf as an example &#amp;t;studio.h&#amp;t;above for example 3 #include &#amp;t;studio.h&#amp;t;int primary () { int x; printf(enter an integer :); (%d&amp;x); printf(Enter:%d,x); Return 0; } Output Enter inte interber : 10 you entered: 10 The computer that enters an interber number (number) as the example above automatically displays the interber number as a stub.
